EDUCATION

Ghulam Ishaq Khan Institute of Science and Technology

Bachelors in Computer Science (2024-2028)

Alpha College (A-Levels)

Pre Engineering

Head Start School System (O-Levels)

INTRODUCTION

Computer Science student with solid foundations in C++ and Python, built projects involving object-oriented programming and data structures.

EXPERIENCE / EXTRACURRICULAR ACTIVITIES

Association for Computing Machinery (ACM), University Chapter

- Active member of ACM student society focused on organizing technical workshops and events
- Contributed to C++ and Python workshops aimed at improving peer programming skills
- Helped in organizing major events including **SOFTCOM**, featuring hackathons, game development modules, and coding activities
- Participated in organizing and supporting **ICPC-style** competitive programming events

Microsoft Hackathon (Participant)

- Participated in a university-level Microsoft hackathon
 - Developed a frontend-based Campus Management Website as part of a team project
 - Gained experience in UI design, teamwork, and rapid prototyping under time constraints
-

PROJECTS

Biolnviso – Full Stack Research Platform (FastAPI, PostgreSQL, React/Vite)

- Developed a full-stack biological research platform using FastAPI and PostgreSQL
- Built RESTful APIs for observations, species, users, and discussion forums
- Designed and implemented complex SQL queries with multi-table joins and relational modeling
- Implemented nested comment system using recursive tree structure logic
- Handled backend validation using Pydantic and ensured transaction safety (commit/rollback)
- Enabled frontend-backend integration using CORS for seamless communication

Bank Management System (Python, Streamlit)

- Built a web-based banking application using Python and Streamlit
- Implemented core functionalities including account creation, deposits, withdrawals, updates, and deletion
- Used JSON file storage for data persistence and management

Intelligent Transport Management System (C++, DSA Project)

- Developed a simulation-based transport management system using C++ and core data structures
 - Implemented modules for managing stations, routes, passenger queues, and vehicle information
 - Applied searching and sorting algorithms to optimize data handling and operations
 - Maintained system history tracking for actions and operations within the system
-

SKILLS

- Languages: C++, Python, SQL(PostGres)
- Web Technologies: HTML, CSS, basic JS
- Tools: VS Code, Linux Bash Terminal
- Concepts: OOP, Data Structures, Algorithms
- Libraries: pandas, NumPy, Matplotlib
